

Gisselle Petty

Software Engineer

(818) 428-9885 · gissellepetty@gmail.com · linkedin.com/in/gisselle-petty · pettyg.me · New York, NY

SUMMARY

Full-stack software engineer with hands-on internship experience at Microsoft, Blizzard Entertainment, and Virgin Orbit. Specializes in frontend engineering, cross-platform development, and cloud infrastructure. Passionate about building accessible, scalable products and tackling complex system-design challenges.

EXPERIENCE

Software Engineer

May 2025 – Present

Microsoft — Azure

- Resolved accessibility and usability issues across Azure Portal experiences, including fixing non-responsive context panes and improving keyboard and screen-reader behavior
- Investigated and debugged partner-reported issues in shared APIs used by hundreds of internal Microsoft teams by tracing feature-flag query parsing and request logic
- Collaborated with authentication teams to enable secure access to protected test cloud environments and implemented load testing to evaluate endpoint scalability (CPU usage, throughput, concurrent users)
- Modernized legacy code by migrating components to React and resolving race conditions introduced by dependency injection lifecycle differences
- Maintained package hygiene across large dependency trees by auditing version constraints, removing deprecated packages, and preventing security and compatibility risks
- Implemented and maintained frontend/backend integration logic for Azure networking resources, ensuring reliable rendering of service configuration data

Software Engineer Intern

June 2024 – September 2024

Microsoft — Azure Portal

- Built Load Balancer's frontend IP configuration components in TypeScript and React for Azure Portal, ensuring seamless integration and a user-friendly interface
- Utilized Ajax to make API calls to backend endpoints for displaying and rendering Load Balancer data; designed an overview for Virtual Machine extensions and organized localization files for global usage
- Developed and executed scenario tests to verify component functionality and wrote unit tests using Jest and Mocha; incorporated security measures to maintain secure access for Azure Portal customers

Software Engineer Intern

June 2023 – September 2023

Blizzard Entertainment

- Designed and implemented a cross-platform Text-to-Speech application and a gamepad sample prototype to enhance native platform support using C++
- Formulated a core API library that facilitated access to platform-specific text-to-speech functionalities on Windows, PS5, and Xbox platforms
- Devised and structured the UI for both Text-to-Speech and gamepad sample applications using the ImGui library alongside internal gamepad libraries

Software Engineer Intern

June 2022 – September 2022

Virgin Orbit

- Developed a web application using Vue.js that notifies admins when an application or its database is down
- Built backend routes using Axios and Express to obtain application status codes and display them in a user-friendly UI
- Utilized Vuex for state management to read, load, and update application status data received from the backend

Code Instructor Code Ninjas Encino

August 2020 – March 2021

- Taught children ages 5–16 to code in JavaScript, HTML, and CSS using popular games such as Minecraft and Roblox
- Created and organized coding lessons focused on basic syntax and logical problem-solving

PROJECTS

Brownstone — AI Licensing & Tracking Middleware *React · Express · MongoDB · AWS*

Built middleware that sits between AI crawlers and websites to handle licensing, permissions, and access tracking. Designed the system architecture with a focus on fairness and incentive alignment for AI-web interactions — a harder problem than any infrastructure challenge faced during the project. Repository organized with Claude Code.

Historical Stories *React Native · OpenAI API · Axios · MongoDB*

Developed a React Native app that exposes OpenAI's text-to-speech, translation, and database features. Defined Axios endpoints to process stories and used MongoDB to store user content, linking each user to their favorite genres and reading history.

Personal Website — pettyg.me *Vue.js · AWS · Custom Domain*

Revamped personal site using Vue.js, presenting job roles and projects via a JSON-driven structure displayed in stylized cards. Hosted on AWS with a custom domain.

Sims 4 Cheats App *Swift · UIKit*

Built a mobile application where users can search and bookmark their favorite Sims 4 cheats, using Swift for backend logic and UIKit for the front-end display.

Krabby Patty Flipping Game *C++ · SFML*

Developed a burger-flipping game using SFML to create a game window, animate sprites, and play SpongeBob-themed background music.

SKILLS

Languages: JavaScript / TypeScript, C / C++, Python, Swift, HTML, CSS

Frameworks & Libraries: React, React Native, Vue.js, Express, ImGui, SFML, UIKit

Tools & Platforms: Azure Portal, AWS, Git, Jest, Mocha, Ajax, Axios, MongoDB, Vuex

Practices: Accessibility (a11y), Load Testing, Unit & Scenario Testing, Localization, Security

EDUCATION

University of California, Davis
Bachelor of Science, Computer Science

June 2025
